

Retail Sales Dashboard - Project Report

1. Project Overview

This project presents an interactive Retail Sales Dashboard developed in Tableau. The dashboard helps analyze sales performance, customer behavior, category-wise revenue, payment preferences, and shopping mall performance.

2. Business Objective

To provide business stakeholders with actionable insights for monitoring sales, understanding customer purchasing patterns, and supporting data-driven decision making.

3. Dataset Information

Dataset: Customer Shopping Data. Key fields include Invoice Number, Customer ID, Gender, Age, Category, Quantity, Price, Payment Method, Invoice Date, and Shopping Mall.

4. Key Performance Indicators

Total Sales: 251,505,794 | Total Quantity: 298,712 | Average Order Value: 2,529 | Total Invoices: 99,459

5. Dashboard Components

Sales KPI Cards, Sales by Shopping Mall, Sales by Category Treemap, Sales by Gender, Sales by Payment Method, and Monthly Sales Trend.

6. Key Insights

Female customers contribute nearly 60% of sales activity. Clothing is the highest revenue-generating category. Mall of Istanbul is the top-performing shopping mall. Cash is the most preferred payment method.

7. Business Recommendations

Increase inventory for top-selling categories, introduce loyalty programs, target female customer segments, and encourage digital payments through incentives.

8. Tools & Technologies

Tableau, CSV Dataset, Excel/Data Preparation, and Data Visualization techniques.

9. Conclusion

The dashboard provides a comprehensive view of retail sales performance and customer behavior, enabling organizations to improve strategic planning and operational efficiency.
